

CREDENZA

PORTABLE TRUST PROFILE — SAMPLE OUTPUT

■ **SAMPLE / ILLUSTRATIVE DOCUMENT** — no real applicant, no real financial data. This is a concept mock-up showing the intended shape of a Credenza report, prepared for the Estonia Startup Visa evaluation. Credenza has no live operational data integration at this stage.

Profile subject	Sara M. <i>(sample persona, not a real person)</i>
Corridor	Iran → Portugal (initial / prototype corridor)
Report generated	Illustrative date — sample only
Trust index	74 / 100 — Established profile (sample)

Illustrative scoring breakdown

Signal	Weight	Status	Confidence
Base coverage	22	—	—
Verified pay slips & statements	28	Included	High
On-chain transaction history (supplementary)	24	Included	Medium
Social guarantor network	22	Not included	—
Home-country registry (opt-in)	26	Not included	—
Total (sample)	74*		

*Illustrative weighting shown for demonstration. The production scoring model, its weights and calibration are to be defined during the pilot phase with participating banks, and will be documented separately.

Verification methodology (sample)

Each included signal is evidenced with: (1) its source, (2) the method used to verify it, and (3) a confidence level — rather than a single opaque number. The receiving bank sees this evidence chain, not just the index, and always makes the final underwriting decision.

Consent record (sample)

This profile reflects only sources the applicant explicitly opted into, each individually revocable. No data source is accessed without an affirmative, logged consent action.
